

IOS Plus Release Notes

v4.05 sp3

25 November 2009

Contents

Enhancements	2
Bugs Fixed	4

RELEASE NOTES

IOS Plus Felix version 4.05 sp3

Version Requirements: This version of IOS Plus requires IRESS frontend version 1.33 sp4.

Enhancements

Administration

Log View

- Creating, modifying and deleting order attributes is now recorded in the Administration change log.

Audit Trail

- Order entry prompts and order acknowledgements are now recorded in the audit trail. Details include the breach message, the order details acknowledged and the time before **Yes** was clicked to accept the warning or order details.

Authorize Orders

- Selected destinations in the Filter button, and the state of the **At Risk** and **Not At Risk** filters, are now remembered when the command is closed.

Order Pad

Configure Display

- The **Expand execution instructions** checkbox has been removed.

Order Search

- Renamed column:

Old name	New name
SecCliOrdID	XRef

Operator Trading System (OTS)

- The countdown box has been removed. There are now no minimum crossing time rules. For more information, see [Creating Priority Crossings in OTS](#).

Priority Crossing

- There are now no minimum crossing time rules. When you click **Send**, the priority crossing is created automatically. For more information, see [Creating Priority Crossings](#).

Status

Global Settings

- Removed field:
 - **Unlock security field for new child orders.**

RELEASE NOTES

IOS Plus Felix version 4.05 sp3

Bugs Fixed

Operator Trading System (OTS)

- For priority crossings when you have an order at the sell price, only the buy order with a volume of 1 is created. Previously, both the bid and ask orders with a volume of 1 were created.
- You can now create priority crossings for short sell orders via **F12**. Previously, typing **P** in the **Param** box for short trades displayed an error message "Invalid condition code:P".

Priority Crossing command

- For priority crossings when you have an order at the sell price, only the buy order with a volume of 1 is created. Previously, both the bid and ask orders with a volume of 1 were created.
- Short sell orders created using the **Cross Short** function are now correctly marked as short in IOS Plus.

Status

Configure User Defaults

- The **Remove exchange** right-click option in the Entry Type table now works.
